Silver Boats

In the early 1990s five ambitious men decided to fulfill their life-long dream and began designing and manufacturing motorboats, which in their opinion best suited the challenging conditions in Northern Europe. They established their own company and already the very first boat they made won an award for best trolling boat. Since then the model range has developed at a fast pace, and the growth sees no end even to this day.

Nowadays Silver boats are quite a familiar sight on Finnish waters, and increasingly also on international waters. That is however not a big surprise, since the Silver boats are a safe choice and in a class of their own: a unique combination of durability, practicality and design.

Our model range consists of three different series; the X-range stands for pure aluminium boats, the Y-range for so called hybrid AluFibre™ models whose hulls are of aluminium and interiors of fiberglass and the Z-range includes boat models in pure fiberglass.

**PROUDLY
MADE  IN
FINLAND**

All Silver boats are designed and manufactured in Finland by passionate boat builders. We are extremely proud of our Finnish heritage and always aim to develop boats that suit a wide variety of people, both for the rough conditions in northern Europe and for leisurely rides on the central European lakes.

X-RANGE ▶▶

Durable pure aluminium boats for active boaters and fishing.

X-range is the most sturdy of the boat ranges. The boats are made purely out of marine aluminium from hull to interior. In the bow a casting deck can easily be installed* using a sep-

arate aluminium platform (additional accessory). The spacious swimming platforms in the back, together with the stern flap seats, form a casting deck in the aft, making the X-models

perfect for fishing. The X-range boats can be used all year round thanks to the durable structure and materials that are easy to clean and maintain.

*) Suits Shark BR^x and Eagle BR^x.

Y-RANGE ▶▶

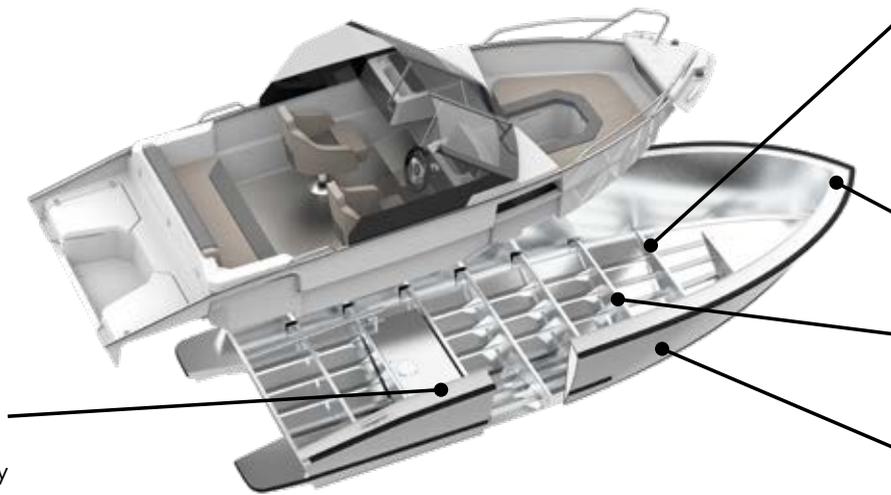

Versatile AluFibre™ models with an aluminium hull and fiberglass interior.

The Y-range consists of the AluFibre™ boat models. The AluFibre™ hulls are made out of durable marine aluminium and the interior out of fibreglass which is easy to uphold. The robust aluminium hull allows you to beach on natural rocky shores and sandy beaches with-

out having to worry about bumps and impacts. Y-range boats are the original Silver boats that have been made in Finland since 1991. The boats are perfect for day trips, leisure rides or as an access boat.

- ✓ **HIGH QUALITY AND FINISH**
- ✓ **STYLISH**
- ✓ **MODERN**
- ✓ **GOOD STORAGE CAPACITY**

The box-like structured sides are filled with non-absorbing polyurethane foam. These "side pontoons" make the boats basically unsinkable.

Reinforcing beams and strengthening cross sections in the hull, gives the boat exceptional torsional stiffness.

The sharp bow cuts easily through waves.

Hull beams and cross sections distribute strain evenly.

The deep V bottom makes the boats stable to steer in all weathers.

Z-RANGE ▶▶

Modern, yet timeless, high-quality leisure boats made fully out of fiberglass.

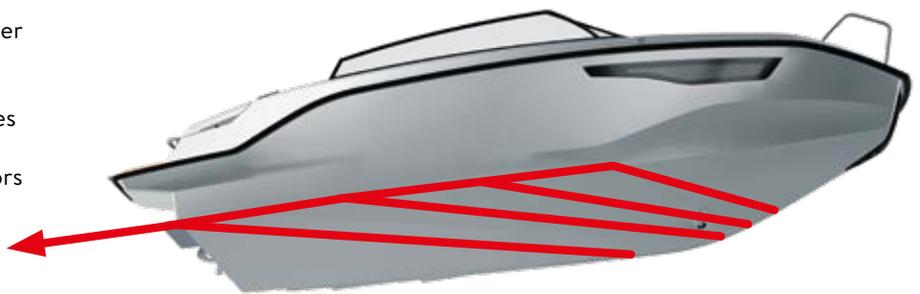

The Silver Z-series includes five boat models, all entirely of pure fiberglass. The Z-range consists of three Day Cruiser models and two Bow Riders, of

which the smallest one, the Puma BR², is the only one with a traditional V-bottom hull. In the larger models we utilize the unique Swedish Petestep[®] technology

in the hulls. Thanks to the Petestep[®] hull the interior remains very dry from seasprays at the same time as it makes the boat stable and consistent to drive.

petestep[®] – A Better Ride

With the help of the unique Petestep[®]-underwater hull, the boats are more quiet, run smoother and plane on a higher level, than boats with conventional V-hulls. The shape of the hull reduces friction and due to this, less force is needed to propel the boat forward. The Petestep[®]-deflectors in the hull redirects sideways flowing spray downwards and to the aft, giving the boat more lift and better forwards motion.

SOFTER

QUIETER

LEANER

MORE STABLE

* Boat models with Petestep[®]-hull: Tiger, Viper och Raptor
